

M2M Multi-Network Sim

Connect any application or device to the internet without worrying about network coverage. Our multi-network M2M SIM roams on most operators in South Africa, offering you a blended usage rate and single management platform.

IoT applications demand pervasive coverage, impenetrable network security and predictable usage pricing. BCX now offers one SIM with intelligent roaming over multiple network operators. This means ubiquitous coverage for any data application, whether you are monitoring a fixed location or tracking an asset around South Africa. This product is also suitable for internet breakout for your employee's tablets or as an alternative connectivity for payment applications.

PRODUCT DESCRIPTION

A powerful M2M SIM that roams across multiple network operators in South Africa, including SIM management tools to manage your entire SIM estate and optionally, device-to-SIM lock and data bundles for data rich applications.

CHOOSE BCX

We have more than a decade of experience in SIM provisioning, management and security.

APPLICATIONS

Some of the applications to which this product is suited.

**IoT applications e.g.
energy meters**

**Remote workers to
corporate VPN**

**Sponsored SIMs
for clients or students**

We can customise the solution and SIM itself to suit your unique enterprise requirements.

FEATURES IN EACH SIM

Manage your entire solution from one portal, that offers you:

- Predictable pricing on SIM activation, SIM management fees and usage. This is based on the volume of SIMs.
- PCI DSS certification.
- SIM preparation and distribution, and self-care management portal.
- Data bundles available for data rich applications.
- Value added features such as device lock, geo-fencing or usage caps.

SOLUTION DESIGN AND PRICING

Contact your BCX account executive to schedule a design workshop. Our specialised solution architects will offer you more information on this product and customise your design to meet your unique requirements.
