REAL-TIME SECURITY BREACH
AND THREAT PROTECTION FOR YOUR BUSINESS.

BCX

Your organisation's IT infrastructure is fundamental to every aspect of your business and having real-time visibility and insight into your organisation's security setup is essential to identify vulnerabilities and attack.

BCX's Security, Monitoring and Detection is a threat protection solution that allows you to detect suspicious behaviour or unauthorised system changes in IT infrastructure. It does this by providing round-the-clock global cybersecurity monitoring tailored to your organisation's requirements and budget.

HOW BCX SECURITY, MONITORING AND DETECTION BENEFITS YOUR BUSINESS:

01.
Achieve compliance with less effort and expense (e.g. PCI-DSS, ISO 27k, SOX, or HIPAA).

02.
No need to replace existing controls that you have already invested in.

03.
It allows you to start protecting your environment without the hefty price tag. It can be scaled as required.

04.
Increasing the reliability of business applications by detecting threats within a short time frame via correlation of security events from different event sources, reducing detection time by automation.

05.
Traceable changes in the IT environment by secure storage of log data out of the reach of administrators with retention period according to your needs.

06.
Service owners no longer need to search critical entries in thousands of log entries.

The BCX Security, Monitoring and Detection solution is available nationwide.
